PROFESSIONAL SUMMARY

Profile

Highly analytical and detail-oriented Economics graduate with a strong foundation in econometric modeling, quantitative data analysis, and financial forecasting. Proven capability in statistical programming using R and Python, alongside advanced econometric software packages. Demonstrated track record of applying economic theories to practical market challenges through academic research and professional internships within the Albanian financial sector. Adept at manipulating large datasets to extract actionable microeconomic and macroeconomic insights, drafting comprehensive analytical reports, and collaborating across multidisciplinary teams to support data-driven fiscal planning.

EDUCATION

Oct 2022 – Jun 2025

Bachelor of Science in Economics

University of Tirana, Faculty of Economy — Tirana, Albania

- **Cumulative GPA:** 3.82 / 4.00 (Top 5% of graduating cohort)
- **Core Coursework:** Econometrics I & II, Advanced Macroeconomics, Microeconomic Analysis, Public Finance, Time Series Analysis, Statistical Methods for Economics, Game Theory, Corporate Finance.
- **Honors:** Recipient of the National Academic Excellence Scholarship for consecutive academic years (2023–2025).

WORK EXPERIENCE

Jul 2025 – Sep 2025

Junior Economic Research Intern

Bank of Albania (Central Bank) — Monetary Policy Department, Tirana

- Assisted senior research economists in aggregating, cleaning, and preprocessing macroeconomic indicators including CPI inflation, core inflation metrics, and quarterly GDP expansion from INSTAT data banks.
- Utilized RStudio and EViews to execute structural vector autoregression (SVAR) models evaluating the transmission mechanism of recent interest rate adjustments on commercial bank lending rates.
- Synthesized data findings into visual dashboards and draft chapters for the quarterly Monetary Policy Report, optimizing layout for upper-management review.
- Conducted literature reviews on regional inflation dynamics within the Western Balkans to benchmark domestic monetary policy tightening cycles against neighboring emerging markets.

Mar 2024 – Jun 2025

Student Research Assistant (Part-Time)

University of Tirana, Department of Economics — Tirana, Albania

- Supported faculty members in gathering microeconomic survey data from 120+ small and medium enterprises (SMEs) across Tirana regarding post-pandemic digitalization hurdles.
- Conducted regular data entry, validation, and diagnostic checks using Stata to eliminate statistical outliers, increasing baseline dataset reliability by 14%.
- Formulated cross-sectional linear regressions to establish correlations between modern digital infrastructure investments and net profit margins among regional service providers.

ACADEMIC PROJECTS

**Final Capstone
Thesis**

An Empirical Analysis of Youth Unemployment and FDI Inflows in Albania

Academic Capstone Research Project — Advisor: Prof. Dr. E. Shehi

- Constructed a robust multiple regression model utilizing annual time-series data spanning from 2005 to 2024 to determine the elasticity of youth unemployment relative to foreign direct investment (FDI) inflows.
- Applied Augmented Dickey-Fuller (ADF) tests to verify stationarity and employed Johansen cointegration tests to evaluate long-run structural equilibriums between indicators.
- Determined that while aggregate FDI exerts a statistically significant downward pressure on general unemployment, its direct structural impact on youth employment segments remains constrained by prevailing domestic labor skill mismatches.
- Presented empirical findings at the Faculty of Economy Student Research Symposium, earning a top-three placement award for rigorous methodological execution.

Term Project

Determinants of Commercial Bank Profitability in the Western Balkans

Advanced Econometrics Course Component

- Built a balanced panel data model leveraging financial health statements from 15 leading commercial banks operating within Albania, Kosovo, and North Macedonia over a seven-year period.
- Evaluated internal indicators (Non-performing loan ratios, Capital adequacy, Asset size) alongside external macroeconomic variables via Fixed Effects and Random Effects configurations in R.
- Drafted a comprehensive 20-page research paper detailing structural methodologies, diagnostic tests (Hausman test, heteroskedasticity corrections), and strategic recommendations for risk mitigation.

TECHNICAL SKILLS

Expertise Areas

Statistical & Econometric Software:

R, RStudio, Stata, EViews, SPSS, MATLAB

Data Science & Programming Languages:

Python (pandas, NumPy, statsmodels, matplotlib), SQL (PostgreSQL)

Financial & Business Tools:

Advanced Excel (VLOOKUP, Index/Match, Pivot Tables, Solver, Data Analysis Toolpak),
Bloomberg Terminal Fundamentals

Reporting & Presentation:

LaTeX, Microsoft Office Suite (Word, PowerPoint), PowerBI

SOFT SKILLS

Core Competencies	Analytical Problem Solving, Quantitative Reasoning, Written Economic Communication, Collaborative Teamwork, High Attention to Detail, Project Management, Structured Critical Thinking, Active Presentation Delivery.
--------------------------	---

LANGUAGES

Proficiency Levels	Albanian: Native Proficiency English: Full Professional Fluency / C1 Level (TOEFL iBT Score: 104) Italian: Intermediate / B2 Level
