

Senior Mechanical Project Engineer

Alba Industrial Systems

Tirana, Albania

Full-Time

About the job

Alba Industrial Systems is seeking an experienced Senior Mechanical Project Engineer to lead the planning, coordination, and execution of complex industrial and infrastructure engineering projects. This position is ideal for professionals with strong technical expertise, leadership capabilities, and experience managing multidisciplinary engineering activities within manufacturing, construction, or industrial environments.

Our company specializes in mechanical system integration, industrial facility development, and energy-related engineering projects across Albania and regional markets. We are committed to engineering excellence, operational efficiency, and long-term innovation within industrial sectors.

As a Senior Mechanical Project Engineer, you will play a key role in overseeing project execution, supervising engineering teams, and ensuring technical quality throughout all project stages. You will collaborate closely with clients, contractors, consultants, and internal departments to ensure successful project delivery.

What You Will Do

- Lead mechanical engineering projects from concept development through implementation and commissioning.
- Supervise engineering teams during design, installation, and testing activities.
- Review technical drawings, calculations, and project specifications for accuracy and compliance.
- Coordinate with electrical, civil, and process engineering teams throughout project execution.
- Manage project schedules, technical deliverables, and engineering documentation.
- Conduct technical evaluations of equipment, suppliers, and engineering proposals.
- Support budgeting, procurement planning, and risk assessment activities.
- Ensure compliance with safety standards, technical regulations, and quality procedures.

- Mentor junior engineers and support technical knowledge development within the team.
- Participate in meetings with clients, contractors, and regulatory authorities.

What We Are Looking For

- Bachelor's or Master's degree in Mechanical Engineering.
- Minimum 5 years of professional engineering experience.
- Strong expertise in industrial mechanical systems and project management.
- Advanced proficiency in CAD software and engineering documentation standards.
- Experience managing multidisciplinary technical projects.
- Strong leadership, communication, and organizational abilities.
- Knowledge of engineering safety standards and quality management procedures.
- Ability to manage technical decision-making in fast-paced project environments.
- Fluent English communication skills.

What We Offer

- Competitive salary package and annual performance incentives.
- Leadership opportunities within large-scale industrial projects.
- Support for technical certifications and engineering training programs.
- Collaborative and innovation-focused engineering environment.
- Exposure to regional infrastructure and industrial development projects.
- Long-term career progression opportunities within the organization.

Alba Industrial Systems is an equal opportunity employer and values technical excellence, collaboration, and continuous professional development.
